

HYDROGARD 7100

POLYELECTROLYTE ANIONIC

Hydrogard 7100 Anionic is a high-quality polyelectrolyte designed for various industrial applications. It is a versatile and efficient solution, offering superior performance in water treatment and other related processes.

Packaging

Hydrogard 7100 Anionic is available in 25kg bags, ensuring convenient handling and storage.

Applications

- **Water Treatment:** Hydrogard 7100 Anionic is highly effective in water treatment processes, aiding in the coagulation and flocculation of suspended particles. It helps in improving water clarity and quality.
- **Wastewater Treatment:** This product is ideal for wastewater treatment facilities, providing efficient solid-liquid separation and sludge dewatering.
- **Paper and Pulp Industry:** Hydrogard 7100 Anionic enhances the performance of paper and pulp production by improving drainage and retention of fine particles.

Benefits

- **High Efficiency:** Hydrogard 7100 Anionic offers superior coagulation and flocculation performance, leading to enhanced water and wastewater treatment results.
- **Cost-Effective:** Its effectiveness allows for reduced chemical consumption, leading to cost savings.
- **Environmentally Friendly:** The product is designed to be environmentally safe, reducing the impact on ecosystems.

Handling and Storage

- **Storage:** Store Hydrogard 7100 Anionic in a cool, dry place away from direct sunlight. Ensure that the packaging is sealed properly to maintain product integrity.
- **Handling:** Use appropriate protective equipment, including gloves and eye protection, when handling the product. Follow all safety guidelines as outlined in the safety data sheet.

Safety Information

For detailed safety and handling instructions, please refer to the Hydrogard 7100 Anionic safety data sheet. Ensure compliance with local regulations and guidelines when using this product.
