

Wedeco L-GXO900 UV Lamp

Overview

The Wedeco L-GXO900 UV Lamp is a high-efficiency UV-C germicidal lamp designed specifically for water disinfection applications. Operating at 80 watts, this lamp ensures effective microbial control in water treatment systems. With a design that includes 4 pins on one end, it offers compatibility with standard UV disinfection systems and simplifies replacement. To maintain optimal performance and ensure the safety of treated water, the lamp is recommended to be replaced every 12 months or after 9000 hours of operation.

Specifications:

- Lamp Type: UV-C Germicidal Lamp
- Power Consumption: 80W
- Base Configuration: 4 pins on one end
- Operating Life: 9000 hours (approximately 12 months)

Material :

- Quartz glass envelope for optimal UV transmission
- Durable electrode and pin connectors for long-lasting use
- Corrosion-resistant construction suitable for water treatment environments

Top Features:

- High-output UV-C germicidal technology
- Long operational life (9000 hours) for continuous use
- Compact design with 4-pin configuration for easy installation
- Ensures reliable disinfection performance with consistent UV dose delivery
- Designed for safe drinking water production

Applications:

- Potable water disinfection
- Residential and commercial water purification systems
- Industrial process water treatment
- UV disinfection systems in wastewater treatment plants
